Solution

Plymovent Emergency Vehicle Exhaust System (3) Sliding Balancer Track Assembly (SBTA) systems

“Not only are we happy with the operation of the system, we would like to express our appreciation with regards to the quality and professionalism of the installation.”

Fire Chief Ralph Kane
Simonds Fire Department

Single lane back-in, SBT

The PlymoVent SBTA system is designed to connect to any motor vehicle tailpipe and capture virtually 100% of the exhaust emissions. The SBTA system is used in single back in bay applications where the vehicle tailpipe is within 40' of the exiting door. Everything is automatic from the fan activation to the automatic release from the exiting vehicle. All that is required is a simple one step connection of the system to the vehicle when entering quarters.

Performance guarantee to comply with local and federal clean air regulations
